Summary

Full Stack Developer with 4+ years of experience, focused on Python/Django backends and infrastructure for high-traffic systems. Over the past 3 years, I have maintained and evolved 90+ white-label platforms in the iGaming industry serving 40,000+ active users, cut response times of critical queries by ~60%, and reduced the deployment cycle from 30 to 4 minutes. I work end to end: data modeling, REST APIs, React/Next.js frontends, and infrastructure on Linux, Docker, AWS, and Cloudflare. I own backend and infrastructure decisions across multiple production projects.

Experience

Full Stack Developer
Jul 2023 – Present

iGaming company (name withheld for confidentiality)

- Maintained and evolved 90+ white-label platforms serving 40,000+ active users
- Cut response times of critical queries by ~60% through SQL optimization and indexing
- Implemented CI/CD pipelines, reducing deployment time from 30 to 4 minutes
- Built an LLM integration for automated support ticket triage, covering 70% of requests
- Designed the user, permissions, and reporting system used by 90+ operations

Python & DevOps Consultant
Dec 2022 – Jul 2023

Bora Transportes

- Administered and monitored Linux infrastructure and resolved critical production incidents
- Optimized complex SQL queries and performed data migrations on an Oracle database
- Automated operational tasks, reducing recurring failures

Full Stack Developer
Feb 2022 – Jul 2023

Freelance, part-time and in parallel

- Delivered complete projects independently: requirements, backend, frontend, database, and deployment
- Data modeling and API integrations for clients across different industries

Full Stack Developer
Jul 2022 – Oct 2022

Mixtel Atacado

- Evolved and maintained a B2B e-commerce platform, improving performance and stability
- Managed servers and production deployments, and configured CDN, reverse proxy, and cloud services

Earlier: maintenance technician at GlobalK Group Technology (2021–2022) and programming instructor at Microcamp (2018–2021).

Personal projects

Pawsh. A study project: a platform for a dog-bathing shop, with a customer website for monthly plans, booking and a store paid by Pix or card, and a staff dashboard for the daily schedule, stock and statistics.

fat-os. Installable app for following a meal plan day to day, with an area where a nutritionist builds the plan: meals, water, supplements and pantry.

Finances Administration Program. Personal budget planner that answers how much you can spend today and when each goal will be met. Calculation engine in pure functions, with 368 unit tests and 64 end-to-end tests.

Screens and details of these and other projects at gabriel-torres.dev.

Skills

Backend
Python, Django, Node.js, REST APIs, Java, C#, PHP

Frontend
React, Next.js, TypeScript, JavaScript, Angular

Databases
PostgreSQL, MySQL, Oracle, SQL

Testing
Vitest, Playwright

AI/LLM
LLM API integration, RAG, embeddings, pgvector

Infra/DevOps
Linux, Docker, AWS, Nginx, Cloudflare, CI/CD, Git

Education

Associate Degree in Systems Analysis and Development
Universidade Cruzeiro do Sul, 2020–2022

Languages

Portuguese	Native
English	C1
Spanish	B2
